

MAGCOR

# ABATEMENT

## Most common dangers

Hiring MAGCOR for your abatement needs is the wisest and safest decision when it comes to removing hazardous materials from any residential, commercial or public building. MAGCOR will properly test for the toxic materials, follow strict regulations and processes, and carry the right abatement removal equipment to keep them, others and you safe from exposure.

### ASBESTOS

Asbestos is actually a naturally occurring mineral made up of soft and flexible fiber. Trapped asbestos fibers can cause serious health consequences. Common symptoms include inflammation, scarring, and potential genetic damage. More alarming is the potential of cancer and lung disease.

### MOLD

The accumulation of mould can become a significant health hazard. Damp conditions with mould growth increases the risk of respiratory allergy symptoms and can intensify the symptoms of asthma in mould-sensitive individuals.

### LEAD

Exposure to lead is very dangerous and is known to cause several health problems in humans. Some health effects from exposure include abdominal pain, constipation, fatigue, irritability and neurological damage among others.
